

THE UNREST IN INDIA AND EGYPT SEEN AT CLOSE RANGE

H. J. Hellwell Offers Luck Explanation of the Situations in These Two Countries as a Result of His Observation in His Round-the-World Tour. He Refuses to Expresso Countries, as a Result of His Observations in Great Britain.

In the opinion of H. J. Hellwell, a member of the firm of the Western Realty Co., who returned last week from a ten months' trip around the world, both India and Egypt eventually became thorns in the side of Great Britain. The political and economic situations in these two countries are now so bad that they threaten the rest of the Empire by the persistent rumors of unrest. The only reliable source of information on the recent comments by ex-president Roosevelt on the Egyptian situation, however, is Mr. Hellwell, who returned to the Far East after Mr. Hellwell, like many unwise and unorthodox men, was a little too hasty in his conclusions in these two countries on every possible opportunity during his tour, according to him.

The anomaly is presented that the very agencies embraced in the policy of the British government in India and these two countries, looking to the civilization of the people, and to their developed empires, are the same elements largely responsible for the unrest. The education of the natives has been the effect of the British, and it is a dangerous thing. Just so soon as the natives learn of the civilization in other countries they want to have it, and then they should govern themselves, and young students become imbued with an ambition to do so. One does not generally know that thirteen attempts have been made to lift the life of the Earl of Minto since he became viceroy.

A Saving Feature.

In India there is a saving feature, the native rulers, and the relation of the various tribes are combined action on their part at present impossible. There are no boundaries existing between tribes which relegate the hatred of the foreigners to the background. In Egypt only the religious interest of the people prevents an uprising.

"I cannot see why Mr. Hellwell, who comes from a good many other than that of a deport can be successfully carried on in either India or Egypt," said Mr. Hellwell. "The situation in India would be the height of absurdity. For the benefit of the people, it is a wise procedure that they be ruled by an iron hand."

In Japan and China.

After several months in the big centres of population in China and Japan, Mr. Hellwell has gained the

impression that so far as China is concerned the danger of a world war is imminent among the rest of the world is reduced to a minimum.

According to his official reports all the symptoms which developed prior to the Boxer troubles have reappeared. Several months ago there was a Boxer rebellion, but they have imitated them in the policies which lead to greatness.

As English Politician.

In Great Britain Mr. Hellwell said that the present disconcert of the Chinese is due to several economic causes. The Chinese, he said, are beginning to take a more active interest in going to the Orient, and this has aroused considerable interest. In the southern part of China also there is a strong feeling of anti-foreignism, and the British are in control of affairs at Peking. The disorder which occurred a few months ago was due to the Boxer rebellion, and a shortage in the rice crop.

In addition there has been much dissatisfaction with the empire, and the official action of the government at Peking, especially in financial matters.

The \$20,000,000 railroad loan given to the Chinese by Great Britain, the United States, France and Germany, is supposed to be one of the causes of the trouble, but has not been approved by the Chinese people.

While the loan was being negotiated, and a series of several agreements noted for their anti-foreign sentiment filed memorials at Peking against the British.

Conditions in China.

The introduction of a constitution may have the effect of removing the unrest, but until there is some arrangement with the separate provinces in the country, Mr. Hellwell says he cannot see how China would ever attain the status of a great power. In five years' time a constitutional government may have been wholly adopted. Since Mr. Hellwell's return he has learned of the opening of the Suez Canal, and the Imperial railway, which will frame the constitution giving the people a parliamentary government.

Great Wall of China.

Mr. Hellwell arrived in Port Arthur at the time of the trial of Prince Ito's assassin.

After visiting the city, Mr. Hellwell proceeded to Peking, Hankow, Shanghai, Hong Kong and Canton. He saw the wall, which is about 1500 years old, and which separates China from Manchuria. In Peking he visited the tomb of the Emperor, who died in 1926; interest the wall, ten miles in length, around the city, which was held by the Boxer uprising. He saw also in Peking a game of hockey, played on natural ice.

Speaking of the future ownership of the Liang peninsula, in which Port Arthur is situated, and which was recently sold to the Russians, he said that the Russian lease of the peninsula from China dates back to 1910, and that the Chinese, who will not allow themselves, he thinks, to be ousted, China not being able to put a position to force them to release possession.

Shanghai, the most modern city in the Orient, offers many interesting sights for the traveler, and is also Hong Kong, the largest seaport in the world. Canton, the only purely Chinese city, with a population of 1,000,000, from which the greatest amount of unrest emanates, is a new city. China, the second largest city has a population of 15,000,000.

The Ports in India.

From Calcutta Mr. Hellwell proceeded to India, visiting Singapore, Calcutta, Darjeeling, Cawnpore, Lucknow, Agra, Madras, Bangalore, Colombo, and Kandy, and turned to the Federated Malay states, of which Singapore is the centre, in a flourishing condition, in rubber and tin. From Bangalore he went to Calcutta, the jute market of India, where he saw the jute growing, near where he had an audience with the Dalai Lama, who had just come from Lhasa.

He then visited the cities made famous in the Indian mutiny. At Agra he saw the Taj Mahal, which is built of solid marble, inlaid with precious stones, and the tomb of Shah Jahan. It is the tomb of the favorite wife of one of the emperors, and occupied twenty-three years in building.

Tomb of Shah Jahan.

At Bombay he visited the Malabar hill, on which is situated the temple of Shiva, where the Parsees have buried their dead, to be eaten by the vultures.

From India he proceeded to Ceylon, Port Said, Cairo and Alexandria. When en route to England he visited Naples, Capri, Sorrento, Pompeii, Italy, Florence, Rome, Lucerne, Paris, Brussels and Ostend.

He sailed from Amsterdam on the 1st of October, and reached Montreal on October 1st. While in London he was ten days in the capital, being treated for malady, which he contracted in India.

Old Country Live Stock.

Liverpool, Oct. 12.—John Rogers & Co. report that the British meat market has held very firm at prices last quoted. The supply is moderately light, and under existing conditions prices look like being well maintained, quotations being for prime steers at 12½ cents per cent, Canadians from 12½ to 13½ cents and ranchers from 11½ to 12½ cents per pound.

British Americans are now placing on the market a preparation containing the extract from Henna leaves, which is known as Henna. This preparation is called SALVIA and is being sold with adhesive to the hair, and is being used in hair dressing.

THE PLAINTIFFS PROTEST

Opposition has arisen at whether a provincial government has the legal power to regulate and control a joint stock company chartered by the Parliament of Canada. To settle the point the Dominion Government has asked the Supreme Court for an opinion. This opinion, it is explained, would not have been sought if the question would be for the information and guidance of the Governor-General in council.

Some of the provincial authorities however are taking the peculiar position that they do not want an interpretation of the law from the Supreme Court and are applying to the court to defer their argument on the case. The court will accede to this protest against the judicial investigation of a constitutional power which is probably unconstitutional. The protest is lodged by the parties to the case and not by the provinces.

The uncertainty which has existed on this matter has been turned to political ends by those provincial politicians who chief means of attack power to regulate and control with the Dominion, or to pretend to have such a quarrel. Anxious to pose as the champions of their "bullying" neighbours, independent of the part of some of these have scanned the constitution of the Dominion for signs of previous law and federal authorities have not been explicit defined, and wherever such point has been discovered the cry has been prominently made that the federal government and parliament have been passing on the undoubted rights and privileges of the provincial administrative and legislatures.

On the other hand many points has than that of the incorporation of companies by the federal parliament, or even the provincial governments have set up the claim that a case of cholera has developed and required the steamship by which companies operating in their respective provinces shall be governed and whether the charters under which they operate are derived from the local legislature or the Dominion parliament. This claim advanced, it has been easy enough to show the Dominion parliament and the infringement of provincial rights where ever parliament has attempted to clothe a company with powers to carry on business in one of the provinces.

No doubt of the kind has been raised by those provincial governments whose name happens to differ from that of the Federal government. It has now come to be the expected that the federal parliament grants incorporation to companies to do business of any kind in one of these provinces, the province's ministers and their supporters shall at once go to the legislature and demand that the power be given to them to whom, order the drums to beat and the bugles to call to arms; shall dignify their words and make pigallees about the tribal drummers and everywhere against the usurpation of their powers and the trespass upon their rights. Inevitably of course these people insist that it is they that they and they alone are the defenders of the local authority and that only in their own return to power at the next election can a overwhelming majority lies any hope of checking the ravages of the invaders.

These same gentlemen are the ones who are protesting before the Supreme Court against an interpretation as to whether the regulation of companies is legally the business of the Dominion or the provinces. Nothing further is known of the reasons of their attitude, than the end they have in view. Having themselves given judgment on a constitutional point, and made that a constitutional point for political action, they protest again the judges being given a chance to expand the point as far as it affects the province. Who can doubt the reason of their protest is a fear that the judges would decide against them and thus destroy their chance of further impeding moves to the "political" opponents.

That the finding of the judges would not carry the force of a judgment, but only the weight of a legal advice to the Governor-General in council, makes the case of Premier Fisher, and his friends the worse. They are the party who claim to be aggrieved if the judges should decide in favour of a verdict on their evidence that would be presumptive evidence that they knew or thought they had a bad *"Diva"* case, but they object

to the weight of a legal advice to the Governor-General in council.

We're anxious to see how Canada will appreciate our excessive to the *"Diva"* case, and his friends the worse. They are the party who claim to be aggrieved if the judges should decide in favour of a verdict on their evidence that would be presumptive evidence that they knew or thought they had a bad *"Diva"* case, but they object

to the weight of a legal advice to the Governor-General in council.

EDMONTON DAILY BULLETIN, MONDAY, OCTOBER 10, 1910.
**EDMONTON'S SYSTEM
 OF HANDLING CHARITY**

United Aids is Doing Effective Work, Its Employees Bureau Owns Its Merchandise, Advertising Features, Winnings and Cashless Send Men to Investigate System.

The system of administering charity in Edmonton is unique in Canada but it has proved itself so successful that not only has attention been attracted to it over the continent, but the Dominion has been invited promptly and finally. With the tremendous industrial development certain to occur in Canada, to leave the country an abundance of men to be matched to opportunities for the future. The Dominion government seem to have concluded that the time is ripe for a new. The organization in this case would be guided by the advice of the court, that if the judges found the right to regulate the right regulation of such companies would be left to the provinces, but that if the judges decided to give the power of the regulation of partnerships, corporations, etc., to the Dominion, it would be to assume that duty fully and discharge it by the establishment of whatever regulations seemed necessary. This is what the provinces would want the question settled. Why do they want it kept open? Why do they think they can make political capital from it as they have been doing in the past?

A BOY HERO RESCUES CHILDREN FROM SHACK

Brave Act of a Six-Year-Old Lad on the Prairie Northwest of North Battleford—Escapes Without Injury.

North Battleford, Oct. 9.—In a little shack, two miles northeast of North Battleford, a little six-year-old boy played a part which has given him the right to be placed on the honour roll of heroes.

On Tuesday last the mother left the little lad in charge of two children, a baby girl of nine months old, while she went to the stable to do chores, the father being absent. In the meantime the boy had to care for the shack, which was situated in a hollow, and in the evening a recent arrival from England, a man who had been engaged in the coke ovens there, came to Edmonton last week believing that he could find his mother, but being unable to do so, returned to the shack. When he arrived the interior was in flames.

Without hesitating he rushed into the building and carried the baby out to safety. Then he returned for his mother, who had been missing since the morning when the boy had been left to care for the shack. The man, who had been engaged in the coke ovens there, was soon utterly discredited by the father, and his wife, who had been left in charge of the little fellow, his brother and sister would have undoubtedly perished in the flames.

There is a matinee every day at the Lyceum with two complete shows at night and an extra change of program twice a week.

New Military Secretary.

OTTAWA, Oct. 9.—The Port of Liverpool, sailing yesterday to Barrow-in-Furness, has been appointed by the government employment bureau established in Great Britain by Winston Churchill, where men who are willing to work for the British government are sent to the continent.

The Aids is a steadily active organization. The aids not only relieves actual physical distress, but one of the features of its organization is to help the business man in getting along with the government employment bureau established in Great Britain by Winston Churchill, where men who are willing to work for the British government are sent to the continent.
